

The Vienna Institute for International Economic Studies

Seminar in International Economics **16 April 2015**

Macroeconomic Stability and the Single European Labor Market

Timo Baas (with Marjan Aikimbaeva) University of Duisburg-Essen

This seminar series is an activity in the framework of FIW ('Forschungsschwerpunkt Internationale Wirtschaft'), which is a project designed to build a center of excellence in research on International Economics, funded by the Austrian Ministry of Science, Research and Economy (BMWFW).

Macroeconomic Stability and the Single European Labor Market

Marjan Aikimbaeva¹ Timo Baas²

^{1,2}Department of Business Administration and Economics University of Duisburg-Essen

FIW-Seminar in International Economics, 16.4.2015

Macroeconomic Shocks and the Common Labor Market

• Previous Work

- Data
- Impulse Response Functions
- Historical Decomposition

Shocks and the Labor Market Previous Work

Labor Mobility

- Increased substantially after 2004
 - 3.2 (1.7) per cent of EU-citizens are mobile
 - 0.2 per cent are on the move every year
 - Dao et al. (2013)
 - 10 sacked workers: 1 unemployed, 6 inactive, 3 migrating
- Is significantly lower than in the US
 - 2 per cent of US-Americans on the move every year
 - Dao et al. (2013)
 - 10 sacked workers: 2 unemployed, 2 inactive, 6 migrating

Shocks and the Labor Market Previous Work

A Common Market

• 1957

- Accept job-offers
- Move freely

• 1999

- EU-citizenship
- Freedom of movement
- Non-discrimination
- Today's issues
 - Differences in social security systems
 - Taxation
 - Recognition of qualification

▲ □ ▶ ● ● ● ●

• 1999

- EU-citizenship
- Freedom of movement
- Non-discrimination
- Today's issues
 - Differences in social security systems
 - Taxation
 - Recognition of qualification

Shocks and the Labor Market Previous Work

More Heterogeneous Union

- 2004 Accession
 - Wages one third of EU-average
 - High youth unemployment
- 2007 Accession
 - Wages one fifth of EU-average
 - Minorities

Shocks and the Labor Market Previous Work

Maroeconomic shocks

• Decision to move depends on economic conditions

- A two-step migration approach
- Migration as a shock absorber

Shocks and the Labor Market Previous Work

Shocks and the Labor Market Previous Work

Business Cycles and Migration

• Jerome (1926)

- Cycle properties of European migration to the US
- 19th and early 20th century
- Easterlin (1966), Kelley (1965), Gallaway et al. (1971)
 - Confirm the business cycle impact on migration
 - Destination country drives migration
- Borjas (2001)
 - Fixed migration costs
 - Regions are close substitutes
 - Two stage decision process

Motivation

he model Results Summary Shocks and the Labor Market Previous Work

Recent studies

• Barrett (2010)

- Migrants are more respondent to shocks
- Increase labor market flexibility
- Bertoli et al. (2013)
 - "Diversion" from Southern-Europe to Germany
 - Destination country drives migration
- Mandelman et al. (2014)
 - Migrants reduce business-cycle impact on natives
 - Border control increases the volatility of wages and unemployment

Shocks and the Labor Market Previous Work

Recent studies

 - Destination country drives migration
- Mandelman et al. (2014)
 - Migrants reduce business-cycle impact on natives
 - Border control increases the volatility of wages and unemployment

Shocks and the Labor Market Previous Work

Our contribution

• Two county, two sector DSGE model

- Endogenous migration decision
- Sticky prices (Calvo-type)
- Migrant and native labor imperfect substitutable
- Bayesian estimation
 - Time-series of bilateral movement Poland-Germany
 - Mixed frequency approach
 - Estimate model parameters
- Address the response to macroeconomic shocks
 - Impact of technology, labor supply, preference and exchange rate shocks
 - Importance of shocks in home and foreign for migration

Shocks and the Labor Market Previous Work

Our contribution

Impulse Response Functions Historical Decomposition

Outline

- Macroeconomic Shocks and the Common Labor Market
- Previous Work

Results

- Data
- Impulse Response Functions
- Historical Decomposition

Data Impulse Response Functions Historical Decomposition

Impulse Response Functions

- Technology shocks in home and foreign affect migration
- Weak impact of exchange rate shocks
- Weak and ambiguous impact of preference shocks in the destination

Data Impulse Response Functions Historical Decomposition

Technology Shock Home

Impulse response functions to a positive technology shock in the domestic country with 5 to 95 per cent confidence intervals. Notes: Each panel shows the response of the model variables to a technology shock of one. The horizontal axes measure time, expressed in months.

Data Impulse Response Functions Historical Decomposition

Technology Shock Foreign

Impulse response functions to a positive technology shock in the foreign country with 5 to 95 per cent confidence intervals. Notes: Each panel shows the response of the model variables to a technology shock of one. The horizontal axes measure time, expressed in months.

Data Impulse Response Functions Historical Decomposition

Preference Shock Home

Impulse response functions to a positive domestic preference shock in the domestic country with 5 to 95 per cent confidence intervals. Notes: Each panel shows the response of the model variables to a technology shock of one. The horizontal axes measure time, expressed in months.

▲ 同 ▶ → 国 ▶

Data Impulse Response Functions Historical Decomposition

Exchange Rate Shock

Impulse response functions to a positive exchange-rate shock with 5 to 95 per cent confidence intervals.

Notes: Each panel shows the response of the model variables to a technology shock of one. The horizontal axes measure time, expressed in months.

Data Impulse Response Functions Historical Decomposition

Labor Supply Shock

Impulse response functions to a positive labor supply shock in the domestic country with 5 to 95 per cent confidence intervals.

Notes: Each panel shows the response of the model variables to a technology shock of one. The horizontal axes measure time, expressed in months.

Data Impulse Response Functions Historical Decomposition

Historical Decomposition

- Shocks can explain deviations in output for Germany and Poland
- Migration flows are predominantly determined by home country shocks
- Preference shocks and technology shocks outpace exchange rate shocks

Data Impulse Response Functions Historical Decomposition

Output Germany

Historical decomposition of output for Germany in the sample period 1/2006 to 12/2014.

Data Impulse Response Functions Historical Decomposition

Migration flows

Historical decomposition of the immigration time-series for Germany in the sample period 1/2006 to 12/2014.

< ロ > < 同 > < 回 > <

Summary

- Migration flows are affected by the business cycle
- Shocks of the home country are more important than those of the destination
 - Preference and technology shocks
- This holds also true for other country pairs (UK Poland)
