

## wiiw FDI Database – NEWS June 2018

---

### wiiw has released an updated version of the FDI Database with 2017 data:

As of June 2018, the wiiw FDI Database has been updated with the most recent data on FDI for all Central, East and Southeast European countries.

This enables the user to analyse flow and stock data in EUR million as well as in % of GDP, % of GFCF or per capita up to and including 2017. Also, for some countries the FDI breakdown by partner or by activity is already available until 2017.

An analysis of the most recent trends is available in the [wiiw FDI Report](#).

### MOLDOVA:

The breakdown by economic activity is now also available for NACE Rev. 2.

Thus, 21 CESEE countries now report according to NACE Rev. 2 (Montenegro and Belarus do not have such a breakdown).

### BPM6 methodology:

wiiw follows the international practice to present the FDI time series according to the **directional principle based on BPM6** ('Balance of Payments Manual sixth edition'). In case the directional principle is not reported by the central banks the asset/liability principle is used.

With this update (June 2018), wiiw presents for two further countries, Albania and Moldova, the main FDI flow and stock data by directional principle (wiiw recalculation from asset/liability principle in cooperation with the central banks; the Albanian FDI data by partner and activities still refer to asset/liability principle). Doing so, two countries, Montenegro and Turkey, still report their FDI statistics according to asset/liability principle.
