Monthly statistics

Bulgaria: growing economy, widening external deficit

BY ANTON MIHAILOV

The economic rebound continued in the first half of 2003; growth accelerated slightly in the second quarter with GDP increasing by 4.4% year on year (up from 3.8% in the first quarter). However, while the average growth rate in the first half of 2003 (4.1% year on year) remained relatively high, it was somewhat below expectations. This was partly due to the poor performance of the agricultural sector, which was badly hit by the prolonged drought.

With gross industrial output up 15% from the same period of last year, industry has been the main engine of growth. The fast expansion has been underpinned by an unexpectedly strong export performance: merchandise exports rose by almost 15% (in current euro terms). Robust domestic demand (both private consumption and fixed investment) also provided support for manufacturing growth. At the same time, the import expansion outpaced that of exports and in consequence, both the trade and the current account deficits widened considerably. As a result, when looked at from the demand side, the picture is somewhat different: while both consumption and fixed investment made sizeable contributions to GDP growth (5.9 and 3.1 percentage points, respectively, in the first six months) the contribution of net exports was highly negative (-3.4 percentage points); changes in stocks also made a negative growth contribution.

Apart from the external deficit, the macroeconomic situation remains fairly stable. Public finances were in surplus in the first half of the year thanks to higher customs revenue (related to the growth in imports) and a notable improvement in tax collection. The latter resulted

The Vienna InstituteWiener Institutfor International Economic Studies (wiiw)für Internationale Wirtschaftsvergleiche (wiiw)Oppolzergasse 6, A-1010 Vienna, Austria, Tel. (+43 1) 533 66 10, Fax (+43 1) 533 66 10-50Email: wiiw@wiiw.ac.at, Web: www.wiiw.ac.at

from the general institutional strengthening of the tax administration but also from changes in the social security system introduced from the beginning of 2003 which reduce the leeway for fraud. Consumer price inflation has been on the decline while a recent change in the PPI methodology prevents an accurate assessment of its latest trends. There has been a notable improvement in the labour market: in June 2003 the rate of unemployment was some 3.5 percentage points lower than a year earlier. The main factors were active labour market policies (including a large-scale public works programme) and changes in eligibility criteria for access to unemployment benefits introduced in 2003.

Low inflation contributed to growing real wages and incomes, giving a boost to real private consumption, which increased by 7.1%. Another factor that contributed to this robust growth was the rapid expansion of household credit: at the end of June 2003, the stock of outstanding household credit was more than 60% higher than a year earlier. Apart from a radical change in the credit policy of commercial banks (which have started a fierce competition in this segment of the market), this reflects a notable improvement in consumer confidence.

Recently, the policy arena has been overshadowed by a continuing row between the government and the IMF over the 2004 budget. While the public dispute has been seemingly dominated by one number - whether the fiscal deficit target for 2004 should be 0.5% or 0.7% of GDP – the roots of the disagreement are deeper. The IMF was obviously dissatisfied with the Bulgarian authorities' departure from the earlier commitment to achieve a zero deficit in 2005 (the 0.5% deficit in 2004 was an intermediate target). Now the government unilaterally sets the balanced budget target for the year 2006. From the Fund's point of view, this is partly related to reluctance to press ahead with some unpopular measures such as the further restructuring in the energy sector and the introduction of costrecovery energy prices (also previously planned for 2004). These are now somewhat behind schedule (local elections were held in October) and the IMF is worried that the reform process will slow down further in 2004 in view of the general elections scheduled for 2005. The Fund also seems to be concerned about the re-emergence of a large external imbalance and its possible negative implications for macroeconomic stability, and claims that a fiscal retrenchment is needed to keep the current account deficit in check.

The government seems to be taking a different stance on many of these issues. One general point is that in recent years the budgetary framework (formulated jointly with the IMF) has been based on extremely conservative revenue assumptions; as a result, revenues have systematically overshot the targets (the situation in 2003 is not much different). Hence there is room for more flexibility as regards spending. On the postponement of the balanced budget target, the government's position is that this is not a sign of lax fiscal policy but just reflects the recent substantial deterioration in the external environment. As to the growing current account deficit, it is argued that its widening is not so much due to unsustainable consumption as to the rapid growth in the export-oriented manufacturing sector which generates much of the recent import demand. Indeed, the fastest growing items in the commodity structure of imports in the first half of 2003 were raw materials and intermediate inputs.

The dispute is not fully resolved yet, but a recent line of possible compromise has been the proposal to include in the 2004 budgetary framework specific contingency measures (including spending cuts) which the Bulgarian government will be obliged to undertake in case revenues fall short of expectations.

Bulgaria's short-term outlook remains positive, but in view of the adverse effects of the drought, growth in 2003 as a whole may fall slightly short of expectations. While the government's target of 4.8% has not been revised, at this point in time it seems increasingly unlikely to be achieved. In summer unemployment fell to very low levels, but taking into account seasonal factors, it will probably increase in the final months of the year. Increased tourism revenues in summer are likely to give a temporary boost to the current account balance but its future dynamics should be followed with caution. Table BG

Romania: becoming attractive for investors

BY GÁBOR HUNYA

Economic growth remained robust in the first half of 2003 but fell short of the 5.2% expected by the government. The official forecast was revised downwards to 4.8% in August, allowing for the effects of the drought. Output figures suggest an even more moderate growth with industrial output rising by only 3.6% in the first eight months. Construction, retail trade and tourism boomed, spreading optimism. Growth was driven by demand, primarily domestic by household consumption and fixed capital formation, while net exports deteriorated. Import demand was fuelled by private consumer demand, industrial demand for intermediary and investment goods, as well as high international energy import prices. Exports rose as well, both to the EU and to accession counties.

Restructuring and FDI accelerated in industry which contributed to a double-digit increase in labour productivity, faster than of real wages. The real appreciation of the leu is not a problem yet for growing exports. The country's attractiveness for foreign investors increased: EUR 827 million was invested in the first seven months of 2003. More and more subsidiaries are moved from the Central European accession countries to Romania. Apart from attracting light industries, recently also the production of car and machinery components has been placed in Romania.

Price adjustment in the energy sector continued in September, bringing the month-to-month CPI to 2.1%, the highest this year. The aim of the IMFsupported programme is to ensure cost coverage prices and also increase payment discipline. Two gas distribution companies have been put up for sale and two of the regional power distribution companies are to be sold by the end March next year. In order to mitigate the temporary inflationary pressure generated by the adjustment of energy product prices, the National Bank decided to increase the reference interest rate by one percentage point. This measure is part of the strategy started by the central bank in August already, with the goal of keeping the 14% inflation target for 2003. Based on the price developments in the first nine months, this aim may only be marginally failed.

In October the IMF approved the final review of the stand-by arrangement, for the first time in the Fund's activity in Romania after the failure of five previous arrangements. Bv this act the government's commitment to continue the reform process has been acknowledged. A decisive moment was the recent decision to privatize large loss-making industrial enterprises. Also for the largest commercial bank, BCR, an interim, partial privatization solution with international banks was found. The privatization of the national oil company Petrom is also under way. But the success of privatization is highly dependent upon the evolution of foreign investors' interest.

Privatization has not reduced the problems over financial indiscipline as budgetary arrears of the private sector are increasing. Soft budget constraints continue to be the main obstacle to calling Romania a 'functioning market economy'.

As to the prospects for 2004, the official expectation is very optimistic. GDP is anticipated to grow by 5.5%, riding on the wave of European recovery and supported by new production capacities. FDI may finance most of the current account deficit. 2004 will be an election year with additional public spending on consumption and infrastructure. The government has already increased budgetary allotments earmarked for social programmes, as well as subsidies to utility companies. Excessive stimulation of growth may result in an overheating due to surging imports and accelerating inflation. But international financial organizations and the EU will apply pressure to keep the reforms on course. The wiiw forecast concludes that economic stability will be maintained but growth will remain below 5%.

Croatia: worsening external imbalances

BY HERMINE VIDOVIC

In the second quarter of 2003, Croatia's GDP growth accelerated slightly. Growth was stimulated by the strong increase in gross capital formation (due to motorway and housing construction), up 17.4% in the first half, and – to a lesser extent – by private consumption (+4.8%). Government consumption has been on the decline for the third consecutive year. Industrial output growth remained high, at 5.5% in the period January-August. Value added in construction expanded by 20.5% as compared with the first half of 2002.

Retail trade, up 5% in the first eight months of the year, performed less dynamically than a year earlier when the turnover had jumped by almost 13%. This is also reflected in the slower growth of household borrowing during the first months of 2003 as a consequence of the credit squeeze imposed by the central bank at the beginning of the year. Following several months of decline, employment started to rise (primarily in crafts and self-employment) from March, reporting a slight cumulated increase compared to the first half of 2002. Mainly due to stricter registration criteria and active labour market policy measures. unemployment fell substantially. In August the jobless rate stood at 18.2%, i.e. 3 percentage points less than in August 2002.

In the course of 2003, Croatia's external position has deteriorated substantially. Despite a favourable tourist season, the current account deficit widened to USD 2.3 billion in the first half of the year (USD 600 million more than in the first half of 2002). The main reason behind this is the expansion of the trade deficit due to soaring consumer goods imports.

In the first half of 2003 the inflow of foreign direct investment amounted to USD 990 million, almost the amount registered in the whole year 2002. In July the Croatian government and the Hungarian oil and gas company MOL signed the partial sale (25% plus one share) of the state oil company INA; receipts will be used for reducing public debt. Currently Croatia's public debt stands at some 50% of the GDP.

The public debate, however, concentrates on the high foreign indebtedness. By the end of July 2003, Croatia's foreign debt stood at USD 19.2 billion, USD 3.8 billion more than at the end of 2002. According to the central bank, about one third of the increase is attributed to currency adjustments (about 70% of the debt is denominated in euro). Looking at the sectoral structure, the debt increase stems mostly from commercial banks (borrowing from parent banks abroad), accounting for 28% of total debt. The major portion of debt is owed by the state - some 38% of the total; however, that share declining. Enterprises, including is leasing departments of banks, account for about one quarter of total foreign debt. According to the central bank, foreign debt might reach USD 20.8 billion by the end of the year. This points to a further deterioration of the country's debt indicators. The debt to GDP ratio would increase to about 75%. However, major problems might occur in the next three years when the debt service burden will rise significantly, to over USD 3 billion per year.

Only recently the CNB rejected a suggestion by the IMF to allow greater exchange rate fluctuations

According to final results for 2002, the fiscal stance proved to be better than originally anticipated: the general government deficit fell to 4.7% of GDP (instead of 6.2% as anticipated by the IMF and the government). This year's deficit might reach a similar magnitude. The 2004 budget is expected only after the parliamentary elections that are to be held on 23 November this year.

In line with the country's recent performance, wiiw has revised the 2003 GDP growth rate upwards to 4.5%. The current account deficit might exceed USD 2 billion, equivalent to about 7% of the projected GDP. Table HR

Macedonia: growth returns

BY VLADIMIR GLIGOROV

After two years of negative growth or stagnation (-4.5 and 0.3 respectively in 2001 and 2002), GDP growth was just below 3% in the first half of this year. Industrial production has been growing by about 3% as well. Exports rose by over 5%. Growth should accelerate next year and should be sustained over the medium term, barring unanticipated external or internal shocks.

The sources of growth can only be exports and investments. This is because budget consolidation will have to continue in the medium term. This year, major adjustments took place. The general government deficit, over 7% of GDP in 2001, at the height of the internal conflict, went down to over 5.5% in 2002 and is expected to shrink to about 2.5% this year. The government is committed to reducing the deficit to 1% of GDP in the medium term. A significant increase in unemployment has been the consequence of this tough fiscal stance. The labour survey showed an unemployment rate of just below 37% in April this year. Further restructuring of the public sector will sustain if not increase the number of unemployed. Thus, private consumption cannot be seen as a source of future growth either.

Exports will grow, though there is a limit to what can be expected before there is growth in investments. The level of exports in Macedonia has been remarkably stable, if external shocks are controlled for. The situation is similar in the case of imports. If growth picks up, the trade deficit can be expected to widen to sustain growth in investments. The latter should then lead to increases in consumption and exports. Eventually, employment should start to increase in the medium term.

Risks to this scenario may come from external and internal shocks. Macedonia depends on neigh-

than other Balkan bouring markets more economies (with the exception of Bosnia and Herzegovina). Thus, negative political developments in Serbia or Kosovo could affect Macedonia significantly. Also, lack of growth of Serbia and Kosovo would present problems for Macedonia exports. As investments in Macedonia are targeting the regional markets, regional developments are important.

Positive influences could come from the European Union. Macedonia is planning to submit its application for membership in the EU at the end of this year. It is not expected that a positive answer will come immediately, but the effort to speed up convergence to the EU should be beneficial to the internal stability. If stability persists, internal problems will prove manageable. Clearly, it is this virtuous circle that the current government is banking on.

The current government is committed to supporting this development by preserving macroeconomic stability. Macedonia has a record of price stability going down almost a decade. This year, prices are not expected to rise by more than 2%. This is anchored in the exchange rate fixed to the euro that was only once corrected back in 1997. This exchange rate regime relied on prudent fiscal policy, which was abandoned during 2001 when the country was on the brink of civil war. The government clearly aims at a near-balanced budget in the medium term to support the exchange rate regime and to keep inflation low.

Tight monetary and fiscal policies put strong pressure on structural reforms, which have been slow, and on the social safety net, which has been thin. The current government intends to speed up restructuring and to introduce an active labour policy. Clearly, the sustained growth and transition of the Macedonian economy depend crucially on the success of both. Table MK

Serbia and Montenegro: investments and elections

BY VLADIMIR GLIGOROV

Writing about Serbia and Montenegro, there are three separate developments to follow: of Serbia, of Montenegro, and of their Union. The country is an atypical confederation of two states that are fully sovereign internally and only share some elements of external sovereignty. They have a foreign representation as the Union of Serbia and Montenegro, but not necessarily the same foreign policy. They also share a common army, but its responsibilities are mostly for the security of Serbia rather than Montenegro. The Union is not a customs and currency union, because tariff rates differ and Montenegro is using the euro as its legal tender. As a consequence, economic and political developments in these three political centres are not necessarily synchronized, though they are not altogether independent of each other.

The Union's budget, financed from the member states' contributions, is mainly spent on the military (and to a much smaller extent on the Union's bureaucracy). Currently, there is a lot of rhetoric about the reform of the military, though the details are still being worked out. The aim is to modernize and downsize the military forces and make them more cost-effective.

In Serbia, the key developments are connected with the political crisis, signs of transitional recession and significant inflow of FDI. The government is fighting for its survival in the parliament, though only few months are at issue because elections are due next year. The current crisis, however, has slowed down the legislative activities, so that some of the structural criteria of the current IMF programme may not be met this year. The reform process has been slow since at least mid-2002 and has all but stood still after the assassination of prime minister Zoran Djindjić in March this year. At the moment, the key laws awaiting parliamentary approval are related to the introduction of VAT, planned for 1 January 2004. Renewed reform efforts can be expected only after the elections have been held.

This year, industrial production will stagnate at best. Agricultural production, which is important in Serbia, will decline by as much as 10% due to severe drought. Construction will register negative growth, though much of it is not captured by the official statistics. Officially, it is expected that the GDP will grow by about 3%, which means that the services sector is still growing. Exports are underperforming, while imports are growing as planned. The trade deficit will be larger than anticipated. Investments are not growing either, which leaves consumption as the main supporter of the expected GDP growth. Wages are rising, but employment is shrinking, so that the net effect of wages on consumption is probably neutral. Incomes from the informal economy may be growing as is public consumption. Whatever growth of GDP is in the end reported, it will not be a very convincing one.

FDI should be in excess of USD 1 billon in Serbia this year. The major contribution comes from the sale of the two tobacco plants and one gas station chain. The government wants to spend the money at the end of this year and throughout 2004. Most of the money will be used for wages, salaries, and pensions. This time around, the government promises that some of the money will go to public investments. This will be a welcome support to the government's re-election bid. Next year, however, much less foreign investment is expected.

In Montenegro, the developments are similar, though industrial production is apparently growing and the tourist season seems to have been good. determinant The kev of the economic developments, however, is fiscal consolidation, which is being implemented, though not as strictly as was assumed under the current IMF agreement. In the medium term, economic developments will be determined by the need to lower public expenditures. As foreign sources of fiscal support are drying out, the fiscal adjustment will prevent Montenegro from growing much faster than 2% to 3% per year.

The Union of Serbia and Montenegro is hoping that the EU will be ready to start negotiations on a Stabilization and Association Agreement in the first half of 2004. The EU expects Serbia and Montenegro to proceed on the road of internal harmonization. Table CS

Ukraine: fast-growing economy, end-game for Kuchma

BY HELEN BOSS HESLOP

The Ukrainian economy grew by 6.5% in January-September 2003 on an annual basis. This represents a deceleration on the growth recorded in the first half, 7.5%. A disastrously poor harvest is the main culprit - farm output is down 16% yearon-year in January-September, and the grain crop is over 60% below last year's. Industry continues its strong recovery, and despite real gains, wages and exchange rates remain competitive. Demand has been buoyed by booming dollar-denominated exports to both Europe and Russia, up 40% and 35% respectively in January-August, and by strong increases in spending on consumer and capital goods, especially buildings: investment overall and construction were up over 20% in the first half; the latter was up 27.5% in the year to 1 October.

Manufacturing grew 17.2% in January-September on an annual basis, faster than in the first half, led as before by engineering goods, metals, and processed food. Retail trade recorded an 11% rise, in parallel with the rise in real incomes. Good performance in industry is still a recovery from the slump, implying it may slow down unless there is suitable investment, better governance, fewer tax and input-price distortions, and better access to world markets for steel and, eventually again, grain.

Monetary policy has been quite successful. Monetization has continued. Payment arrears have been reduced, though Naftogaz remains an offender, and the state itself is guilty of failing to refund half a billion USD worth of VAT to exporters - a bone of contention with the IMF, who cited this in declining to approve a USD 725 million precautionary stand-by agreement in September. The budget may be under pressure, as evidenced by the government's borrowing of USD 200 million on foreign capital markets in September. Consumer- and producer-price rises are higher than in 2002, but well below double-digits. Inflation is expected to rise in 2004, an election year. While the exchange rate vis-à-vis the USD has remained stable, it has fallen sharply against the EUR. Wages remain a fraction of those in Poland, Slovakia and Hungary, averaging only EUR 72 per month; promised public-sector wage rises are not funded. Sovereign foreign debt is under control, the current account surplus has hit 9.5% of GDP, and reserves have soared, reaching 13.4 weeks of imports.

President Kuchma got Brussels' and Washington's attention by signing a treaty in mid-September with Russia, Belarus and Kazakhstan that aims to create a Single Economic Space (SES), possibly with a common external tariff. Members' applications to the WTO are to be co-ordinated, when Ukraine was likelier to be accepted before Russia, Problems abound, Several of Kuchma's own ministers were opposed to the deal, despite its opt-out clauses, and it may not be ratified. EU Commission President Prodi in October softened the recent hard line that Ukraine was not on any list of possible future members, mentioning four goals Ukraine must reach to be considered: market economy status from Brussels, WTO membership, free trade with the EU and adoption of the acquis. Italian president Berlusconi described Ukraine as 'on course' for membership.

Both the EU and the US are pressing Ukraine not to give in to Russian pressure permanently to reverse the Odessa-Brody pipeline so the latter can pump more oil to the Black Sea – the line was conceived to earn Ukraine transit fees taking Caspian oil to Europe. In late October a border dispute with Russia over an island in the Sea of Azov has opened some eyes re Russia's intentions.

President Kuchma remains highly unpopular, and ex-PM Viktor Yushchenko is still the likeliest candidate to win the direct presidential contest in October 2004. Though Kuchma has acknowledged he is ineligible to run for a third term, there are still distracting proposals to change the constitution to grant him some kind of figurehead status with immunity from prosecution, and to give parliament, still full of his ex-red director supporters, new powers over the successor. Multiple improvements in the business climate, currently blocked by vested interests, are needed to sustain growth after the recovery phase peters out. Table UA

1) According to new calculation for industrial output and prices.

2) Ratio of unemployed to the economically active, from July 2002 according to new labour force base.

3) Based on cumulated national currency and converted with the average exchange rate.

4) Cumulation starting January and ending December each year.

5) Adjusted for domestic and foreign (US resp. EU) inflation. Values less than 100 mean real appreciation.

6) According to International Accounting Standards.

1) In business entities with more than 20 persons employed.

2) Ratio of unemployed to the economically active population.

3) Based on cumulated national currency and converted with the average exchange rate.

4) Cumulation starting January and ending December each year.

5) Adjusted for domestic and foreign (US resp. EU) inflation. Values less than 100 mean real appreciation.

6) Deflated with annual PPI.

7) From July 2001 pension payments are included.

8) From January 2002 including social security funds.

1) Enterprises employing 20 and more persons.

2) Ratio of job applicants to the sum of economically active, women on maternity leave and job applicants.

3) Calculation based on industrial sales index (at constant prices).

4) Based on cumulated national currency and converted with the average exchange rate.

5) Cumulation starting January and ending December each year.

6) Adjusted for domestic and foreign (US resp. EU) inflation. Values less than 100 mean real appreciation.

1) Economic organizations employing more than 5 persons.

2) According to ILO methodology, from 2002 3-month averages comprising also the two previous months.

3) Revised according to NACE 50+52, from January 2003 NACE 52.

4) Based on cumulated national currency and converted with the average exchange rate.

5) Cumulation starting January and ending December each year.

6) Revised data according to international standards (e.g. trade data refer to customs statistics).

7) Adjusted for domestic and foreign (US resp. EU) inflation. Values less than 100 mean real appreciation.

8) According to ECB monetary standards.

1) Enterprises employing more than 9 persons.

2) Ratio of unemployed to the economically active.

3) Based on cumulated national currency and converted with the average exchange rate.

4) Cumulation starting January and ending December each year.

5) Adjusted for domestic and foreign (US resp. EU) inflation. Values less than 100 mean real appreciation.

6) Revised according to ECB monetary standards.

1) Enterprises with more than 50 (in food industry 20) employees.

2) Ratio of unemployed to economically active population as of December of previous year, from 2002 as of December 2001.

3) January 1994 to December 2002 calculated from USD by wiiw.

4) Cumulation starting January and ending December each year.

5) Adjusted for domestic and foreign (US resp. EU) inflation. Values less than 100 mean real appreciation.

6) From 1, February 2002 reference rate of RNB.

1) Seasonally adjusted.

2) Based on labour force survey.

3) According to ILO methodology.

4) Including estimated turnover of non-registered firms, including catering.

5) Based on cumulated USD and converted using the ECB EUR/USD average foreign exchange reference rate.

6) Cumulation starting January and ending December each year, incl. estimates of non-registered imports.

7) Based on balance of payments statistics.

8) Adjusted for domestic and foreign (US resp. EU) inflation. Values less than 100 mean real appreciation.

1) Ratio of disposable number of registered unemployment calculated to the economically active population as of previous year.

2) Based on revised index schema of 2000, excluding VAT and excise taxes.

3) According to NACE (52 - retail trade), excluding VAT.

4) Based on cumulated national currency and converted with the average exchange rate.

5) Cumulation starting January and ending December each year.

6) Adjusted for domestic and foreign (US resp. EU) inflation. Values less than 100 mean real appreciation.

7) From January 2002 corresponding to the 2-week limit rate of NBS.

1) Excluding small firms.

2) Ratio of unemployed to the economically active.

3) Official registered enterprises.

4) Based on cumulated USD and converted using the ECB EUR/USD average foreign exchange reference rate.

5) Cumulation starting January and ending December each year.

6) Adjusted for domestic and foreign (US resp. EU) inflation. Values less than 100 mean real appreciation.
